Dear recruiter at Trendlog,

I am writing to apply for the student job as a Code Warrior at Trendlog, based on the job posting at SDU Jobbank. I found both of the tasks working with back-end or embedded Linux very interesting.

I am a 22 year old Software Engineering student and former Computer Science student. Currently I have 2 years left of my bachelor's degree, and intend to carry on with the master afterwards. I switched to Software Engineering, as I found the project work and focus on programming much more interesting and fulfilling. Up until now Software Engineering has been a better experience than expected (with all the coding!).

I live in Odense, in my free time I work on small projects, such as maintaining my web server, and creating small hobby coding projects. I e.g. created a desktop widget for displaying data from Rejseplanen utilizing their API and a local database for data storage using PostgreSQL.

I am curious about learning new skills, and building on my existing coding skills. Another aspect of this that I am very interested in working with an experienced team, and learning from this team.

Feel free to contact me by phone or email at any time.

Best regards

Peter Heilbo Ratgen
